

HADIQA NAEEM

Data Analyst

Hyderabad | hashmihijazi7@gmail.com | github.com/Hadiqa-Naeem | linkedin.com/in/hadiqa-naeem

PROFESSIONAL SUMMARY

Detail-oriented Computer Science graduate (Master's) with a strong foundation in Python, SQL, and data analysis. Skilled in cleaning, transforming, and validating large datasets, building automated reports, and monitoring dashboards for anomalies. Quick learner with a strong analytical mindset, adept at building automated reports and dashboards that surface clear, actionable business insights.

TECHNICAL SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy, data cleaning & transformation, exploratory data analysis, statistical analysis

Databases & Tools: SQL, Excel, Google Sheets, Power BI, Tableau, DAX, Power Query, Git/GitHub, Jupyter Notebook

Business Intelligence: Data Visualization, Dashboarding, Business Metrics & KPI Tracking, BI Analyst

Relevant Concepts: Data validation & quality checks, report generation/automation, dashboard monitoring, anomaly detection

EDUCATION

Master of Science in Computer Science

University of Sindh

PROJECTS

Portfolio: github.com/Hadiqa-Naeem

SuperStore Sales Performance Dashboard — SQL & Power BI

GitHub: github.com/Hadiqa-Naeem/SQL-Interactive_Dashboard_PowerBI

- Analyzed \$1.57M in US retail transactions across 5,898 orders (2019–2020) using SQL for exploratory data analysis and business question framing
- Built a data model in Power Query (star schema, custom date table, derived columns) and wrote 20+ DAX measures for KPIs, time intelligence, and ranking logic
- Designed an interactive 3-page Power BI dashboard (sales & profit, product performance, customer analysis) that surfaced actionable insights, e.g. identifying 1,098 orders generating negative profit and the top 10 loss-making products

Advanced Retail Sales Analytics — PostgreSQL

GitHub: github.com/Hadiqa-Naeem/advanced-retail-sales-sql-analysis

- Performed end-to-end retail sales analysis in PostgreSQL, covering data quality checks (row validation, missing values, duplicates), KPI calculation, and business reporting
- Used advanced SQL (CTEs, window functions, RANK/DENSE_RANK, LAG, NTILE, rolling calculations) to analyze revenue trends, customer lifetime value, and product performance
- Delivered insights on delivery/return/cancellation rates, top vs. lowest-selling products, and month-over-month revenue growth to support data-driven business decisions

CORE STRENGTHS

- Analytical problem-solving — breaking down messy, real-world datasets into clear, actionable insights
- Attention to detail — careful data validation and quality checks to ensure accuracy before reporting
- Fast learner — self-taught SQL, Power BI, and DAX to independently deliver end-to-end analytics projects
- Clear communication — translating technical findings into business-friendly insights and visuals
