

HADIQA NAEEM HASHMI

Data Analyst

Hyderabad, Sindh, Pakistan | hadikaanaeem@gmail.com | +92 334 3876826

github.com/Hadiqa-Naeem | linkedin.com/in/hadiqa-naeem

PROFESSIONAL SUMMARY

Career switcher from Computer Science education into data analytics, combining 4 years of teaching experience with hands-on SQL, Power BI, and Python project work. Delivered end-to-end analyses of 5,800+ retail transactions (\$1.57M+), building interactive dashboards and 20+ DAX measures that surfaced actionable business insights. Strong communicator with a track record of translating complex, technical concepts into clear, decision-ready information.

TECHNICAL SKILLS

Programming & Databases: Python, SQL, PostgreSQL

Data Analysis: Pandas, NumPy, data cleaning & transformation, exploratory data analysis, statistical analysis

BI & Visualization: Power BI, Tableau, DAX, Power Query, Excel, Google Sheets

Core Competencies: Data validation & quality checks, KPI/business metrics tracking, report automation, dashboard monitoring & anomaly detection

Tools: Git/GitHub, Jupyter Notebook, Generative AI for analytics & prompt engineering

PROJECTS

Portfolio: github.com/Hadiqa-Naeem

SuperStore Sales Performance Dashboard — SQL & Power BI

GitHub: github.com/Hadiqa-Naeem/SQL-Interactive_Dashboard_PowerBi

- Analyzed \$1.57M in US retail transactions across 5,898 orders (2019–2020) using SQL for exploratory data analysis and business question framing
- Built a data model in Power Query (star schema, custom date table, derived columns) and wrote 20+ DAX measures for KPIs, time intelligence, and ranking logic
- Designed an interactive 3-page Power BI dashboard (sales & profit, product performance, customer analysis), identifying 1,098 orders generating negative profit and the top 10 loss-making products

Advanced Retail Sales Analytics — PostgreSQL

GitHub: github.com/Hadiqa-Naeem/advanced-retail-sales-sql-analysis

- Performed end-to-end retail sales analysis in PostgreSQL, covering data quality checks (row validation, missing values, duplicates), KPI calculation, and business reporting
- Used advanced SQL (CTEs, window functions, RANK/DENSE_RANK, LAG, NTILE, rolling calculations) to analyze revenue trends, customer lifetime value, and product performance
- Delivered insights on delivery/return/cancellation rates, top vs. lowest-selling products, and month-over-month revenue growth to support data-driven business decisions

EXPERIENCE

Freelance Image Sourcing & Editing

2025 – Present

Self-employed

- Source and edit images for client projects based on brief requirements, managing multiple concurrent requests and deadlines
- Apply careful attention to detail in selecting, organizing, and refining visual assets to meet client specifications
- Communicate directly with clients to clarify requirements and deliver revisions efficiently

Computer Science Teacher

2021 – 2025

Hayat School and College, Hyderabad

- Taught Computer Science fundamentals, including data structures, databases, and logical problem-solving, to secondary level students, building a strong foundation that carried directly into data analytics
- Tracked and reported on student performance and attendance data, applying early data organization and reporting habits later formalized through SQL and Excel
- Communicated technical and abstract concepts in clear, accessible terms to students, parents, and school administration, a skill now applied to translating data insights for non-technical stakeholders
- Managed lesson planning, deadlines, and multiple concurrent classes, developing strong organizational and time-management discipline

CERTIFICATIONS

- Data Analytics with Generative AI — August 2026
- Get Started with SQL Analytics and BI on Databricks — Databricks, August 2026

EDUCATION

Master of Science in Computer Science

2021

University of Sindh

CORE STRENGTHS

- Analytical problem-solving — breaking down messy, real-world datasets into clear, actionable insights
- Attention to detail — careful data validation and quality checks to ensure accuracy before reporting
- Fast learner — self-taught SQL, Power BI, and DAX to independently deliver end-to-end analytics projects
- Clear communication — translating technical findings into business-friendly insights and visuals, honed through 4 years of classroom teaching
